EDUCATION

B.Sc. in Computer Science

2022 – 2026

Al-Balqa Applied University — Al-Salt, Jordan

SKILLS

UI/UX & Design: UI/UX Design, Wireframing, Prototyping, Design Systems, User Flow, Information Architecture, Responsive Web Design, Dashboard Design, Multilingual Interfaces, Accessibility (WCAG), Figma

Programming Languages: Python, JavaScript

Frontend Development: HTML, CSS, React, React Router, Tailwind CSS, Vite, Component-Based Architecture, Responsive Web Design

Backend Development: Node.js, Express.js, REST API Design, Firebase, Firestore, Authentication, Database Integration

Tools & Platforms: Git, GitHub, GitHub Pages, VS Code, npm

Technical Foundations: Full-Stack Web Development, Unit Testing (Vitest), Data Structures, Algorithms, File I/O, State Management, Local Storage Persistence

PROJECTS

StudyFlow — Student Study Planner (UI/UX Case Study & Web App)

Tech: React, Vite, Tailwind CSS, React Router, Recharts, Local Storage

- Designed and built a responsive student-productivity web app with a custom design system and 10+ reusable components across 10 fully interactive screens.
- Implemented full task and course management (create, edit, complete, delete, filter, search, sort), with course progress computed dynamically from task data.
- Built a Pomodoro-style focus-session timer and a Recharts-powered analytics dashboard tracking weekly study time, completion rate, and study streaks.
- Authored a complete UI/UX case study covering user personas, user flows, wireframe-to-final comparisons, and accessibility decisions.

Little Lemon — Full-Stack Restaurant Reservation Platform

Tech: React, React Router, Node.js, Express.js, Vite, Vitest

- Built a full-stack restaurant website and reservation system with a React front-end and a custom Express REST API backend.
- Designed REST endpoints for menu data, live table availability, and reservation creation, with server-side validation and persistent storage.
- Implemented an asynchronous booking flow with React Router and useReducer, including real loading and error states rather than static mock data.
- Wrote automated tests (Vitest, Supertest) covering both front-end state logic and backend API routes.
- Applied accessibility best practices: semantic landmarks, labeled form fields with live validation messaging, and keyboard-visible focus states.

ReLeaf — Smart Paper Recycling Management Platform

Tech: HTML, CSS, JavaScript, Firebase, GitHub Pages, Firestore, Git

- Developed and deployed a full-stack web platform using JavaScript and Firebase, connecting institutions with recycling centers for paper and carton collection.
- Built multilingual responsive dashboards for customers and administrators with authentication and request tracking.
- Integrated Firebase Authentication and Firestore database synchronization for real-time data persistence.
- Implemented customer and administrator dashboards, recycling request tracking, location-based workflows, and analytics features.

CERTIFICATES

CS50P: Introduction to Programming with Python — Harvard University

January 2026

Completed a comprehensive Python course covering problem-solving, data structures, algorithms, and software development fundamentals.

Meta Front-End Developer Professional Certificate — Meta | Coursera

August 2026

Completed a comprehensive front-end development program covering HTML, CSS, JavaScript, React, and responsive web design.

Meta Back-End Developer Professional Certificate — Meta | Coursera

In Progress

Studying server-side development, databases, APIs, and version control as part of Meta's back-end curriculum.
